DETAILED ACTION

Response to Amendment

1. Claims 1-2, 4-8, 10-12, 14-19, and 21-32 are currently pending in this application.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 24-27 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The applicant has defined a machine readable media to include non-tangible media such as carrier wave signals.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-2, 4-8, 10-12, 14-19, and 21-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Number 6,088,722 to Herz et al. in view of U.S. Patent Number 6,357,042 to Srinivasan et al..
- 5. Herz teaches the invention as claimed (As in exemplary claim 28) including a system comprising: a broadcast system, and one or more client systems coupled to the broadcast system;

Application/Control Number: 09/532,034

Art Unit: 2142

wherein the broadcast system is coupled to broadcast meta-data to a plurality of client systems, the meta-data including sets of descriptors and/or attributes describing respective pieces of broadcast programming content from among a plurality of pieces of broadcast programming content up for consideration to be included in a future, yet to be scheduled, broadcast (col. 12, lines 26-48 and col. 14, lines 24-64); wherein the plurality of client systems are coupled to rate in response to a content rating table one or more of the plurality of pieces of broadcast programming content described by the meta-data, the content rating table generated using the meta-data and containing ratings derived from observations of data pieces of broadcast programming content having similar descriptors and/or attributes to the descriptors and/or attributes included in the meta-data that have been previously accessed via that client system (col. 12, lines 26-48 and col. 14, lines 24-64); wherein the one or more client systems are coupled to transmit to the broadcast system the ratings of the plurality of pieces of broadcast programming content (col. 14, lines 17-23); wherein the broadcast system is coupled to select a portion of the plurality of pieces of broadcast programming content in response to the ratings received for the plurality of client systems (col. 22, line 64-col. 23, line 38); and wherein the broadcast system is further coupled to broadcast the selected portion of the plurality of pieces of broadcast programming content (col. 22, line 64-col. 23, line 38); however Herz does not explicitly teach **broadcasting** meta-data to the client in order to rate content.

Srinivasan teaches the concept of broadcasting meta-data in video data stream (col. 20, lines 15-53).

It would have been obvious to one of ordinary skill in the Computer Networking art at the time of the invention to combine the teachings of Herz regarding the scheduling of data in a broadcast Art Unit: 2142

system with the teachings of Srinivasan regarding the concept of broadcasting meta-data in a video stream because Herz already teaches broadcasting so the teachings of Srinivasan provide a way for Herz to deliver information to set top boxes without having to modify the concepts taught by Herz.

- 6. As to claims 2, 15, and 25, Herz teaches a machine readable medium and method wherein the selected portion of the plurality of pieces of broadcast programming content that are broadcast are pieces of broadcast programming content having higher content ratings than a remaining portion of pieces of broadcast content that are not selected (col. 22, line 64-col. 23, line 38).
- 7. As to claims 4, 12, 16, and 23, Herz teaches a system able to receive a broadcast schedule of the second plurality of pieces of broadcast programming content prior to selectively receiving the portion of the second plurality of pieces of broadcast programming content (col. 47, lines 9-30).
- 8. As to claims 5 and 17, Herz teaches a system able to broadcast a broadcast schedule of the meta-data prior to broadcasting the meta-data to the plurality of client systems (col. 47, lines 9-30).
- 9. As to claim 6, Herz teaches a method wherein broadcasting the selected portion of the plurality of pieces of broadcast programming content to the plurality of client systems comprises broadcasting one of the plurality of pieces of broadcast programming content having a higher rating prior to broadcasting one of the plurality of pieces of broadcast programming content having a lower rating (col. 22, line 64-col. 23, line 38).

10. As to claims 8, 11, 19, 22, and 27, Herz teaches receiving a meta-data broadcast schedule broadcast by the server system, the client system activated in response to the meta-data broadcast schedule (col. 47, lines 9-30).

11. As to claims 29-32, Herz teaches a system wherein each of the plurality client systems is coupled to selectively receive and store a portion of the selected portion of the plurality of pieces of broadcast programming content in response to a content rating table associated with each respective one of the plurality of client systems (col. 47, lines 9-30).

Response to Arguments

- 12. Applicant's arguments filed 10/3//2005 have been fully considered but they are not fully persuasive.
- 13. Herz teaches the a system for sending a questionnaire to customers in order to obtain a customer profile which is then used to schedule future broadcasts of programs. The questionnaire is considered meta-data because it describes the types of programs that will potentially be broadcast. The customers' response to the questionnaires is considered a content rating. The applicant's claim language is not specific to the form of the meta data nor the content rating returned by the client, so therefore Herz can be interpreted to read on the applicant's claimed invention.
- 14. It is logical to combine Herz with Srinivasan because Herz does not explicitly say anything about how the questionnaires are sent to the customers. Broadcasting the questionnaires would be a logical delivery method because the system of Herz is already broadcasting the program data. Srinivasan shows that the concept of broadcasting meta-data

Application/Control Number: 09/532,034

Art Unit: 2142

along with program data was a well known concept even if it was not explicitly mentioned by Herz.

15. The rejection based on U.S.C. section 101 is maintained because mediums defined as potentially being carrier waves are non-statutory.

Conclusion

16. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

17. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Douglas B. Blair whose telephone number is 571-272-3893. The examiner can normally be reached on 8:30am-5pm Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Caldwell can be reached on 571-272-3868. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
